Art Unit: 1711

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-4, 12 and 13 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6 of U.S. Patent No. 6,442,119. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims are directed to the same method and optical lens comprising a specific benzotriazole UV absorber and a thiourethane or a diethylene glycol bisallylcarbonate monomers.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily

published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-4, 12 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Amagai (061).

Amagai discloses optical materials made from episulfide monomers (see col. 2, line 20), and he discloses adding 2-(2'-hydroxy-4'-n-octoxyphenyl) benzotriazole as a UV absorber (col. 7, line 49). It's been held generally not judicious to choose a species from a single list (In re Wiggins, 179 USPQ 421). All the examples of Amagai show the same yellowness index values as those specified in the claims. The amount of benzotriazole added would determine the amount of UV light absorbed or transmitted. Amagai teaches adding 0.01-0.3 wt % (col. 11, line 42), which overlaps the amount taught by the applicant (0.01-5 wt. % on page 5, par.2 under "Detailed Description").
